Skills

Technical Skills: Python, C++, SQL, JavaScript, Django, Flask, Amazon Web Services (AWS), Git, Langgraph

Projects

CX-Linux *python, ReactJS, langgraph, Agentic AI*

A multi-agent, do-it-all AI assistant for Linux — designed to coordinate multiple specialized agents to streamline workflows across both the desktop and terminal. It enables faster task execution by intelligently delegating responsibilities such as command generation, system operations, and contextual assistance.

Smart Lighting System *Flask, MQTT*

Built a smart light system that can be used over the web with a webApp and server. Installed and developed custom electronic modules for signal reception and light ambience control.

Gita based therapy chatbot *Python*

Developed a chatbot to recommend Bhagavad Gita verses based on emotional input using keyword-based NLP techniques.

TradingView stock market bot *Python, React, Django, Git*

Developed a bot that delivers BUY/SELL signals for US stocks via Telegram, based on the client's specified strategy

Automated Quotation & Invoice System with Sales Analytics *Python, React, Django*

Developed a React application to automate quotation and invoice creation, while also delivering in-depth sales analytics for a client

Awards

MIT WPU Ideathon Winner — *Sept, 2024*
